Tue, 17 Jul 2018 14:18:00 GMT - The answer is no moons at all. That's right, Venus (and the planet Mercury) are the only two planets that don't have a single natural moon orbiting them. Figuring out why is one question keeping astronomers busy as they study the Solar System.. Astronomers have three explanations about how planets get a moon or moons.

Tue, 17 Jul 2018 05:21:00 GMT - Charles Francis Richter (/ ˈ ɛ ʁ ɪ k t ɪ ˈ m r /); April 26, 1900 – September 30, 1985) was an American seismologist and physicist.. Richter is most famous as the creator of the Richter magnitude scale, which, until the development of the moment magnitude scale in 1979, quantified the size of earthquakes. Inspired by Kiyoo Wadati's 1928 paper on shallow and deep earthquakes, Richter first used ...
